

Georgia Dubeux, originally from Recife, Pernambuco, Brazil, is pursuing a master's degree in Dr. Nicolas DiLorenzo's lab. After completing her medical degree at the Universidade Federal de Pernambuco in 2002, she dedicated nearly a decade to working in pediatric emergency rooms across multiple hospitals in her hometown. In 2011, her life completely changed when her family decided to move to the United States. For the subsequent nine years, she dedicated herself to raising and educating her three children as a stay-at-home mom. However, her passion for knowledge never stopped. In 2021, Georgia reignited her academic pursuits by contacting Dr. Nicolas DiLorenzo and enrolling in the master's program in animal sciences at the University of Florida. Under Dr. DiLorenzo's guidance, she is investigating the potential use of algae as a supplement in beef cattle operations.
